BIBFRAME & Linked Data 101

By: Elizabeth Cramer & Andrea Leonard

Abstract

These slides were used during an ASERL webinar and cover an exploration of BIBFRAME, how it relates to MARC, and the basics of Linked Data. It shows examples of some early experiments using BIBFRAME from libraries in different parts of the country.

BIBFRAME and linked data

What is BIBFRAME?

- What about MARC?

What is linked data?

What is happening now with BIBFRAME and linked data?

What are the current challenges?

What is BIBFRAME?

BIBFRAME is the bibliographic framework initiative headed by Library of Congress and Zepheira (a data management company) as an eventual replacement for MARC.

BIBFRAME is created with the idea of allowing data to break free from the “document-like” environment of the MARC record and onto the web.

BIBFRAME is built on web standards in order to connect library data with the data available on the web.

What about MARC?

The MARC format severely limits what we can do with integrating bibliographic data into the web.

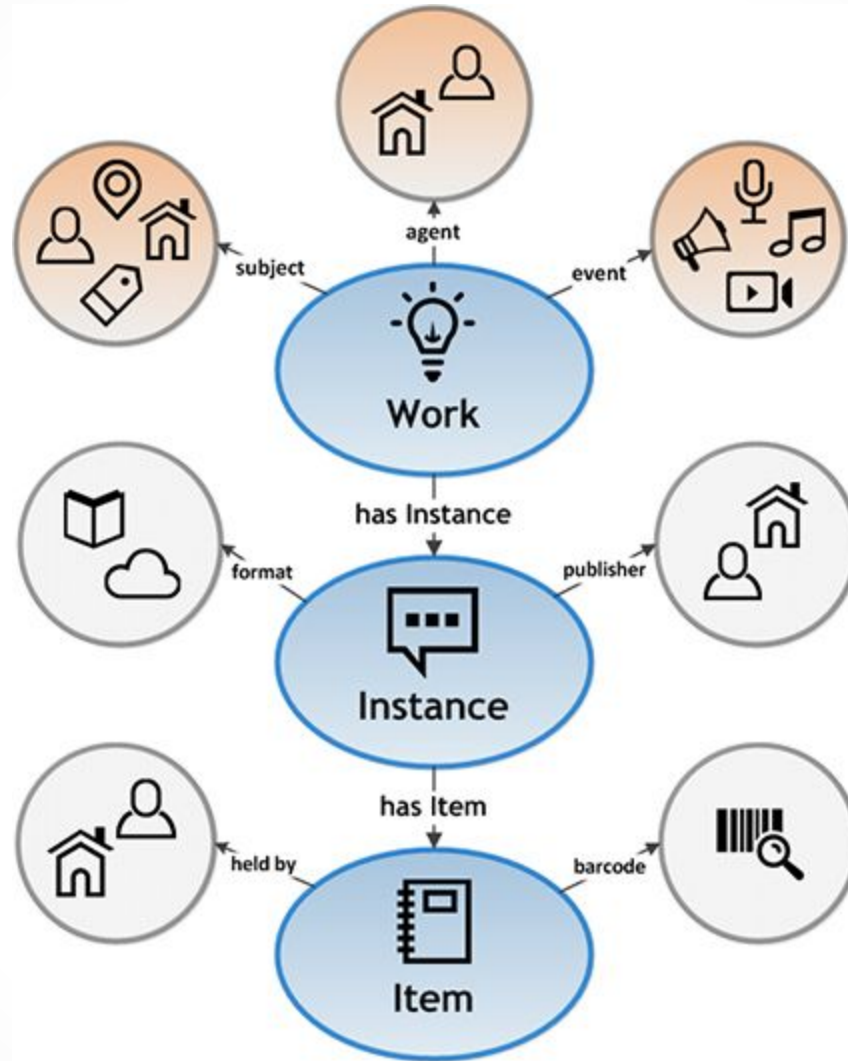

- Not used outside of libraries
- Inability to adequately express relationships between entities and resources being described
- Higher possible error rate for MARC data stored as static text within a catalog “silo”

What is linked data?

Linked data is the framework behind the semantic web.

Semantic web recognizes relationships between data.

- Semantic framework: Subject -- Predicate -- Object
- Example: Mark Twain -- Creator of -- Tom Sawyer

These relationships are known as “triples.”

What is linked data?

The web can recognize these relationships between data based on the foundation of the web specific standards XML and RDF (Resource Description Framework)

RDF labels data and allows machines to recognize relationships between data

Name Dahl, Roald

Description Award winning author of children's and adult works, master storyteller Roald Dahl is best known for tightly paced tales that include elements of fantasy. His adult short stories often feature mysterious happenings and include unexpected twists. In his children's books, the child characters are the definite heroes while sometimes the adults come off as bumbling and unlikeable. His children's books are often filled with dark humor and gruesome but intriguing, violent events. Some of his most memorable plots involve monstrous characters some wicked and some friendly.
