ABSTRACT

The purpose of this study was to determine the effects of single-gender instruction on academic achievement in reading and math for middle grade students. The study used a representative sample of 8 public middle schools in the United States from diverse geographic, economic and racial backgrounds. Quantitative measures included scores from state standardized tests. Scores measured changes before and after single-gender implementation designs at each school. Qualitative interview data identified additional effects of single-gender instruction. Analysis of the research literature and the data from this study revealed that single-sex instruction does not negatively impact academic achievement.
ACKNOWLEDGEMENTS

My thanks go to my former students who opened my eyes to the need for teachers to use different methods to meet academic and social needs of children. I am especially grateful to Sarah Garguilo, a talented teacher who shares the same drive to make a change in public education and whose inspiration helped me think about different ways to reach students. I would like to thank Charity Bell whose encouragement and mentorship led me to the path of administration.

Special thanks go to my family and friends who helped me every step of the way. Thanks extend to Megan Gorham and employees at General Electric for their editing and motivation.

The UNCW Graduate School provided financial support for my research with the award of the Brauer Fellowship. My thanks go to Dr. John Fischetti for his support and encouragement during my research stages and throughout my graduate studies.

The faculty in the Watson School of Education was incredibly supportive throughout the thesis journey. Dr. Marc Sosne provided support by referring me to relevant articles on single-gender instruction and serving with Chris Furr on my thesis committee. I am especially thankful for Dr. Howard Coleman for the hours of discussion about educational trends and my introduction to the world of administration. His expertise was an invaluable tool through the data collection and writing process. I will never write the same again.
