

THE IMPORTANCE OF DETRITUS AND MICROENVIRONMENT NUTRIENT
ENRICHMENT TO THE GROWTH OF CORAL REEF MACROALGAE,
HALIMEDA AND *DICTYOTA*

Benjamin M. Mason

A Thesis Submitted to the
University of North Carolina at Wilmington in Partial Fulfillment
Of the Requirements for the Degree of
Master of Science

Department of Biological Sciences

University of North Carolina at Wilmington

2004

Approved by

Advisory Committee

Martin H. Posey

Carmelo R. Tomas

Alina M. Szmant

Chair

Accepted by

Robert D. Roer

Dean, Graduate School

TABLE OF CONTENTS

ABSTRACT	iv
ACKNOWLEDGMENTS	vi
LIST OF TABLES	vii
LIST OF FIGURES	viii
INTRODUCTION	1
Algal Phase Shifts	2
A Changing Paradigm	4
Detritus	6
METHODS	8
The Study Area	8
Nutrient and Detritus Surveys	9
Sampling	9
Collection and Analysis of Water Samples	10
Collection of Detritus and Algae	10
Processing and Analysis of Samples	11
Statistical Analysis	12
Algal Growth Experiment	12
The Growth Chambers	12
The Algae	13
Field Deployment and Sample Processing	13
The Treatments	14
Water Sampling and Analysis	15

Statistical Analysis	15
RESULTS	16
Nutrient and Detritus Surveys	16
Detritus Distribution	16
Nutrient Content of Algal Tissue and Detritus	16
Nutrient Content of Water Samples	17
Algal Growth Experiment	19
Algal Growth	19
Nutrient Analysis	19
DISCUSSION	20
Detritus Standing Stock	21
Nutrient Content of the Detritus	23
Dissolved Nutrient Concentrations	25
Algal Growth Experiments	27
CONCLUSIONS	30
LITERATURE CITED	32
TABLES AND FIGURES	39
