

Figure 6. Percentage of black sea bass eggs with multiple oil droplets under different hormone treatments. Data are expressed as a percentage of total eggs spawned. Letter indicates hormone (L = LHRH-a, G = GnRH-a), number indicates dose ($\mu\text{g}/\text{kg}$), and word indicates release rate (slow or fast). Data represent means \pm standard error ($N = 6-21$). No significant ($P > 0.05$) differences among treatments were observed.
