

Figure 9. Mean spawned egg diameter (mm) of black sea bass eggs produced under different hormone treatments. Data are means \pm standard error ($N = 6-21$). Letter indicates hormone (L = LHRH-a, G = GnRH-a), number indicates dose ($\mu\text{g}/\text{kg}$), and word indicates release rate (slow or fast). Mean values with a different letter are significantly ($P < 0.05$) different.
